ABOUT ME

Software Engineer currently working in Bancolombia's Technology area, focused on developing web solutions and participating in their design, planning, development, testing, and deployment. Expertise lies in front-end development, with consistent work involving test automation tools, back-end development, and DevOps practices for CI/CD.

Strong leadership and teamwork skills, highly proactive and initiative-driven, and fully motivated by new challenges and opportunities. Passionate about the world of technology, fueling a deep curiosity and eagerness to learn new technologies and learn the best development practices.

WORK EXPERIENCE

Semi Senior Software Engineer DEC 2024 - TODAY
Bancolombia

Lead front-end developer of the team, in addition to the responsibilities previously listed in past experiences; the role involves a deeper focus on applying design patterns and development best practices, addressing vulnerabilities, and engaging in other activities to **reduce the project's technical debt**. Furthermore, there is increased involvement in other areas of software development, such as **back-end** and **infrastructure**.
Technologies: Angular, Azure Pipelines, Playwright, Spring & AWS.

Junior Software Engineer AUG 2024 - DEC 2024
Bancolombia

Development of new features, participation in redefining the project's **micro-frontends architecture**, creation of CI/CD pipelines, as well as providing **support and maintenance** for the solution. Additionally, began taking on the **QA role** within the team, handling the entire **certification and automation** process for new developments. Furthermore, the entire **testing stack and architecture** used in the project were also redefined to ensure higher quality and agility in these processes.
Technologies: Angular, Nx, Azure Pipelines & Playwright

Talento B: Software Engineering (Trainee/Jr) AUG 2023 - AUG 2024
Bancolombia

Participation in the Talento B initiative, which aims to empower young technology enthusiasts to define and tackle high-impact challenges within the organization. The challenge undertaken involved **developing reusable web components** for the **Bancolombia Design System**, which were made available for use across all applications in the organization. Additionally, **support, development, and maintenance** were provided for an internal application of the VP "Ecosistemas".
Tecnologías: Angular, TypeScript, NgRx, RxJs, Jest & SerenityBDD.
